## WORKING PAPERS

Mikdash, Maya, and Reem Zaiour. “The Impact of Police Shootings on Gun Violence and Civilian Cooperation” *under review*

**Abstract:** This paper studies the effect of exposure to police involved shootings on gun violence and crime reporting as a measure of civilian cooperation. To distinguish between crime reporting and crime incidence, we use administrative data on 911 calls and ShotSpotter data from Minneapolis. By exploiting the variation in the timing and the distance to these incidents, we show that exposure to a police shooting increases gun-related crimes by 5-7 percent and decreases shots reported by 1-2 percent. Taken together, this implies a 6 to 9 percent decrease in the reporting rate following a police shooting.

Mikdash, Maya. “The Impact of Internal Oversight on Arrest and Use of Force”

**Abstract:** While there is much desire for holding police accountable for misconduct, there is little evidence on whether the most common accountability system, internal affairs, impacts police behavior in intended or unintended ways. Using data from a large city where there is conditionally random assignment of officers to 911 calls, I employ regression discontinuity and difference-in-differences methods to distinguish the impact of investigations from confounding factors. Results indicate that increased oversight from internal investigations does not change an officer’s likelihood of making an arrest or using force. This is true across different types of allegations, including those that are sustained. Surprisingly, even imposing sanctions after a sustained allegation does not change police behavior, irrespective of the severity of the sanction. This has important policy implications, as it suggests that the current system of internal oversight has no impact on police behavior.
